Project Overview

The objective of this project is to analyze the trends of COVID 19 infections to predict a spike in infection rates, and inform the general public in the 254 counties in the state of Texas.

We attempted to create a tool that will show how the trends are behaving in their specific counties, giving the user the ability to create informed decisions about when and where to get a vaccine.

The user will be able to use the map to locate vaccination sites near them as a preventive measure.

Timeline Page

The largest peak in hospitalizations occurred in December 2020 and January 2021, aligning with the largest peak in reported case rates .

Though initially discovered in Wuhan, China, in late 2019, COVID-19 entered the conversation in the U.S. in January 2020, when the Centers for Disease Control and Prevention (CDC) alerted the nation of the outbreak abroad.

The federal COVID-19 PHE declaration ended on May 11, 2023. Most tools, like vaccines, treatments, and testing, will remain available. CDC's ability to collect and share certain data will change. CDC is updating its guidance to align with data changes.

State of Texas All Time Numbers

Cases: 8,508,204

Fatalities: 92,378

Vaccinated: 22, 322,586

(at least one dose)

Fully vaccinated: 18,406,327

Procedure

Completed:

- SQL (Postgresql)
- CSV data files
- Index.html

In process:

- app.py
- app.js

CONCLUSION:

Our team sought to create an interactive tool with real world applications for people in Texas who would like to stay informed of the COVID 19 spread in their specific area. With the use of this tool, users could look for spike in cases and search for a pharmacy within their county that offers the COVID 19 vaccine.

The interactive tool was built from data from the Texas health and human databases between 2020 and 2023 and attempted to highlight the trend in cases and the distribution of vaccines in Texas. These two variables shed light on the fatality rate and how the introduction of the vaccine allowed for a decrease in fatalities and confirmed cases.

FUTURE WORK:

We are committed to continue working on the final details of the interactive tool.
